Installing the Cisco AnyConnect Client

1. Open any web browser and type http://vpngate.umsmed.edu in the address bar.

2. When prompted click the “Always accept content from this publisher” button and then click
the run button.

3. You will see this screen

4. You will then see this screen click the “Do not show this dialog next time if all modules are safe” button and then click the proceed button.
5. You will then see the login screen. Please log in using your Active Directory/VPN username and password.

6. Upon successfully logging in you will see this screen.
7. Click the “Start AnyConnect” button. You may see this screen if you do not have Active X installed on your PC.

8. If so just allow the timer to tick to 0 and the AnyConnect client will install.
9. You will then see this screen.
10. Upon successfully installing the client you will see this screen.

11. You have successfully installed the Cisco AnyConnect VPN client. You will notice the new icon in the Windows System Tray in the lower right hand corner. At this point you can close your web browser. You are now connected to the UMMC VPN network.

12. You now have a Cisco AnyConnect program group in the Start Menu. It will look like this.
13. Please click the Cisco AnyConnect VPN Client icon and open the program. Upon opening the program you should see this.

14. This is the Statistics tab of the client. It displays connection information and confirms that your computer is now connected to the UMMC VPN network.

15. To disconnect from the UMMC VPN network, select the Connection tab and click the Disconnect button.
16. From this point on when you wish to establish a secure VPN connection open this client press the Select button and type in your username and password.
